

Routine Immunization Schedule

Vaccines are an unpleasant but necessary part of maintaining health. We strongly recommend timely vaccination to ensure adequate protection for your child. Our immunization schedule is based on the latest information from the CDC and American Board of Pediatrics. We have carefully reviewed our schedule to ensure your child receives the proper vaccinations at the appropriate time. Where possible, we use combination vaccines to reduce the total number of shots for your child. We welcome any questions or concerns you may have about the individual vaccines or the schedule.

AGE	VACCINE
0-1 month	Hepatitis B
2 months	DTaP/Hep B/Polio (combo) HiB; Pneumococcal; Rotavirus
